AAZ79917 to AAZ80766 represent double stranded cDNA clones isolated from the human colorectal adenocarcinoma (Colon cancer) Cell line SWA80. The cDNA clones can be used to generate antisense oligonucleotides which can be used for antisense therapy. Methods and products from the present invention can be used for identifying and/or classifying cancerous cells present in a human tumour, particularly in solid tumours, e.g. carcinomas and sarcomas, e.g. breast or colon cancers. The cDNA clones can be used for developing agents for the diagnosis and treatment of disorders involving unwanted cell proliferation, such as neoplasia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    2155 TGCAAAATTCCCTCAAAGAGCTGTGGTCTTTGTTGCATTCATCATGCCAGAAAATTTT 2214

The present sequence encodes a 218 kD dermatomyositis specific autoantique, designated Mi-2. The sequence numbering given in the specification starts at nucleotide 91, i.e. the 5' UTR is omitted, as well as the 'A' of the first ATG start codon. The protein is hydrophilic, acidic and protruding regions of the protein are characteristic of helicases. The gene corresponding to this cDNA was localised to chromosome I2 (12pl3). The DNA can be used for the recombinant production of Mi-2 which is used for .e.g. the differential diagnosis of collagen diseases, esp. dermatomyositis, e.g. by immunoassay or Mestern blotting.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                /*tag= a

The invention relates to a method of regulating plant developmental identity which involves transforming a host cell with a nucleic acid encoding PKL (plckle) protein having atleast one chromo domain, a helicase domain, a DNA binding domain and a zinc finger domain.

This method is useful for transforming a host cell with PKL proteins for regulating developmental identity, such as for regulating the proteins act as chromatin remodelling factors to repress transcription of LEC1, a protein that plays a role in regulating embryo development. The proteins also used for generating transgenic plants expressing PKL proteins.

The present sequence is a cDNA coding for Arabidopsis thaliana PKL protein found in pickle root. PKL functions in regulating developmental dentity in host cells. It is classified as CHD3 protein based on the presence of chromo domain, SNR2-related helicase/ATPase domain, CNA-binding domain and PHD zinc finger domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ||

The invention relates to isolated polynucleotide (I) and probes, polypeptide (II) sequences. (I) is useful as hybridastion probes, polypeptide (II) sequences. (I) is useful as hybridastion probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving to restore normal activity of (II) or to treat disease states involving a polypeptide in itssue, as molecular weight markers and as food supplement. (II) and its binding partners are useful for treating a food supplement. (II) and its binding partners are useful for treating clisorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in diagnostics. formsics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of date and products dependent on DNA and diagnostic coding sequences of the invention.

Whose: The sequence data for this parent did not appear in the printed specification, but was obtained in electronic format directly from MIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1648 AAAGICTGGAGTTAAGAGATTAICAGTTAAATGGATTGAATTGGCTCGCTCATTCATGGT 1707

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL0196-ABL1051), expressed DNA sequences (ABL01975) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            54; Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     6065 tragaccetateaacttgagggtettaattggttgaagttttettggtacaacaccaca

The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511), expressed DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     (ABB57737-ABB72072).

The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           7379 agatggtaaagatttatagattgctttgcaggaatacctatgagcgtgaaatgttcgaca 7438

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell interactions -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins

Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length oDNAs.

Claim 8; SEQ ID 14295; 2537pp + CD ROM; English.

The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the collgonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5-end sequence and an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5-end sequence and an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide comprises a fleast 15 nucleotides and the compination of the 5-end sequence/3-end sequence is selected from those defined in ctre specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length CDNAs. The primers are also useful for the detection and/or diagnosts of the abnormality of the proteins encoded by the full-length cDNAs. The primers are also useful for the AMH18613 to AMH18613 represent human amino cold sequences; AMB3446 to AMH18613 to AMH18613 represent human amino cold sequences; AMB3446 to AMH18613 repr the present invention.

It currently consists of 10 contigs. The true order of the pleces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Center code: WIBR

* NOTE: This is a 'working draft' sequence. It currently

* consists of 33 contigs. The true order of the pleces

* is not known and their order in this sequence record is

* arbitrary. Gaps between the contigs are represented as

* runs of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence

* as soon as it is available and the accession number will

* be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Consensus quality: 229677 bases at least 040
Consensus quality: 260799 bases at least 030
Estimated insert size: 271581: sum-of-contigs estimation
Quality coverage: 8.62 in 020 bases; agarose-fp estimation
Quality coverage: 8.55 in 020 bases; sum-of-contigs estimation
* NOTE: This is a 'working draft' sequence. It currently
* consists of 47 configs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
                                                                                                                                                    ACU92382 276181 bp DNA linear HTG 03-JUL-2001
